

SCANBELT MODULAR BELTING

APACHE'S SCANBELT MODULAR BELTING -

KEEPING INDUSTRY MOVING

AS ONE OF THE WORLD'S LEADING MANUFACTURERS OF PLASTIC MODULAR CONVEYOR BELTS,

ScanBelt offers more than 30 years of experience providing products to the market. Well recognized in international markets, the combination of the ScanBelt product manufacturing with the Apache fabrication and assembly capabilities has made this product now accessible to more of the North American market.

The current ScanBelt offering from Apache includes more than 50 different belt types that can be used in a wide variety of applications and can therefore offer the ultimate solution no matter the request or customization required.

APACHE

SCANSELT ...keeping industry moving.

APACHE IS THE EXCLUSIVE DISTRIBUTOR OF SCANBELT PRODUCTS IN THE USA AND MEXICO.

As one of the largest belt suppliers and fabricators in North America, Apache is known for heavy duty and lightweight rubber and fabric belts, this strategic partnership with ScanBelt, adds plastic modular belting to the full suite of products in the Apache belt fabrication offering.

With installations worldwide, in industries ranging from food to heavy-duty automotive applications, ScanBelt has covered the full spectrum of plastic modular applications that have become common place in the conveying world.

As a quality control measure, design, tool making, and plastic molding all take place at ScanBelt headquarters in Hjorring Denmark. Full fabrication and assembly of the belts will take place at Apache's main production facility in Cedar Rapids, lowa, by Apache's ScanBelt certified technicians.

SCANBELT

S.12

SCANBELT

A true Mini-Pitch with a 12,5 mm pitch. Designed for light transport. It is able to go around a 14 mm nose bar for very tight transfers. Placement of sprockets is flexible across the belt width, i.e. no risk of assembling or installation mistakes. The links are designed with open rod access and are consequently very easy to clean. The belts can be delivered with flights and rubber top surface.

S.25

The S.25 is a range of 25 mm pitch belts designed to solve all aspects of light to medium transport. The series consists of 17 belt types with distinct characteristics when it comes to open area and surface structure. Closed and open belts with smooth or structure surface. Raised ribs and rubber surface. Belts with very good cleanability for meat and poultry industry. An effective drive system with side guiding and an excellent grip in the belt. Fully bi-directional sprockets for reversible conveyors.

SCANBELT

S.25-100/600/700

25-100 Type of drain/filter belts. Very small openings.

25-600 Type of drain/filter belts. Very small openings.

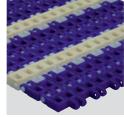

25-700 Open drain belt with smooth surface. For cooling/freezing.

- Very even water flow and airflow for cooling and horizontal freezing through the belt
- Rounded ribs for very smooth sidewarl transfers
- Light products, such as snack foods and sweets, pasta industry for cooking and drying

S.25-400/400F/402/411

25-400 Open belt with smooth surface for cooling and drainage. Easy to clean

25-400F Open friction top surface for packed goods on slight inclines. Easy to clean

25-402 Raised ribs for minimum product contact. Air circulation under product. Easy to clean

ISO 9001:2008

25-411 Open helt with curved surface for minimum product contact. Easy to clean

EASTY TO CLEAN

- The open 25 mm pitch alternative for medium-heavy duty general purposes
- Dairy industry, shellfish, bakery sector. Rubber top surfaces for handling of packed products on inclines
- Efficient sprocket engagement, due to its large contact surface between teeth and belt
- Comes with a variety of surfaces, including flat, net-like, curved, rubber top surfaces

ISO 9001:2008

SCANBELT

The S.25 is a range of 25 mm pitch belts designed to solve all aspects of light to medium transport. The series consists of 17 belt types with distinct characteristics when it comes to open area and surface structure. Closed and open belts with smooth or structure surface. Raised ribs and rubber surface. Belts with very good cleanability for meat and poultry industry. An effective drive system with side guiding and an excellent grip in the belt. Fully bi-directional sprockets for reversible conveyors.

25-418 Closed top with an diamond

pattern.

General light transportation.

25-420 Raised rib surface

canning industry.

For small transfers in bottling and

mm openings. 1,2 mm longitudinal flights to "lift"

25-413 Perforated surface with 1 x 6 products.

- Narrow draining opening for minimizing product waste (406), mini-flight top (413)
- Option of moulded-in side guards in various heights (408, 413)
- Raised ribs that limit the contact surface between the belt and the product (420) Bottling and canning industry,
- pasta and shellfish industry (cooking, blanching) Available with ScanBelt's unique,
- revolutionary self-lock, one piece rod retention system

S.25-800/801/806/808F/830/836

25-800 Flat top closed surface Easy to clean for general food applications.

Easy to clean for seafood industry and other food aplications requiring drainage.

25-801 Open surface for drainage. 25-806 Perforated flat top surface Easy to clean food applications requiring light drainage.

EASTY TO CLEAN

- Even lines on the back side ensure uninterrupted flow of cleaning fluids
- Conical link design maximizes the access for cleaning around the hinge area
- Light to medium transport of smaller products in the red meat, poultry and fish industry
- Large variety of surfaces, including flat, perforated flat top and different cone top patterns
- Available with ScanBelt's unique, revolutionary self-lock, one piece rod retention system

25-808F Closed friction top surface. Transport on slightly surface Easy to clean for frozen products and positioning for small inclined conveyors. Easy to clean

contact.easy to clean for sweets/ sticky products.

25-836 Perforated nub top surface for light drainage and minimum

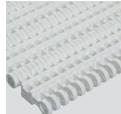

The S.50 series is a range of 50 mm belts designed for medium to heavy transport. The series consists of 19 types of belts with different surface structures and openings. A complete range of easy to clean belts for high hygiene applications. Rubber surface and different nub top structures for good product grip. Extensive number of accessories, such as flights, side quards, line modules and hold downs etc.. Effective sprocket systems with side quiding. Fully bi-directional sprockets for reversing belts. The series contains a vast span of pulling forces from light cooling belts to solid heavy duty belts for car and pallet handling.

S.50-100/300

50-100 Open surface for drainage. Medium-heavy duty transport in general.

50-300 Light open grid surface for drainage. Lifts product and minimizes contact area.

- The open 50 mm alternative for medium-heavy duty general purposes
- ▶ Fishing industry: all parts of the process from gutting and trimming to scaling and packing
- Fruit and vegetable industry, glass industry, car
- Excellent sprocket engagement for added pulling force
- Smooth, drained surface for heavy transport

S.50-220

50-220 Raised ribs for transportation of unstable products. Bottle and can industry, including pasteurizers.

50-401 Very open surface. Max airflow for cooling/freezing.

50-701 Largest open surface. Max airflow for cooling/freezing area.

- Largest open area of any straight running belt in the market
- Extremely even water flow and airflow or cooling/freezing
- Designed for IQF Freezers and freezing tunnels
- Small single openings in the design

S.50-600/600F/602/606/608/610/630

50-600 Perforated flat top for light

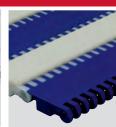

50-602 Flat top with 3 mm ribs. For 50-606 Perforated flat top surface handling sweets, vegetables and other small products

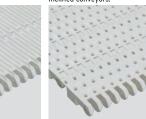

50-608 Flat top closed surface. General transportation

ISO 9001:2008

50-600F Closed friction top surface. Transport on slightly inclined conveyors.

for handling dairy products, vegetables, snack foods etc.

staggered flight pattern top. Minimal contact.

Dairy production, snack foods, grain, fishing, fruit and

vegetable industry

S.50

SCANBELT

The S.50 series is a range of 50 mm belts designed for medium to heavy transport. The series consists of 19 types of belts with different surface structures and openings. A complete range of easy to clean belts for high hygiene applications. Rubber surface and different nub top structures for good product grip. Extensive number of accessories, such as flights, side guards, line modules and hold downs etc.. Effective sprocket systems with side guiding. Fully bi-directional sprockets for reversing belts. without non-skid patterns

RADIUS BELTS

SCANBELT

25 years in spiral and radius belt business has resulted in a range of 25 and 50 mm pitch belts going in curves. Belts suitable for both J-curves and S-curves are available. The 25 mm range has a market low collapse factor (from 1,5:1 x belt width) without compromising the pulling force and product placement. Side guards, line separators, friction top and holddowns/hooks are all available in this range. The 50 mm series is widely used in heavy duty spirals. The reinforced outer links gives a very high pulling force without any steel-to-steel contact.

applications

S.100R/S.101/S.101TAB/J.101/S.101TRACK

S.100R Open radius belt with heavy outer links on both sides. Steel reinforcements or moulded-in side S- and J-curves for spiral coolers/ guards can be supplied.

ACCESSORIES

S.101 Open radius belt with a very low collapse factor. Can run in

S.101TAB Open radius belt with a very low collapse factor. Can run in low collapse factor. Can run in S- and J-curves for normal radius applications

J.101 Open radius belt with a very J-curves only for spiral coolers/ freezers as well as normal radius

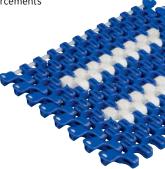

a very low collapse factor. Comes with integrated tracks underneath for easy guiding. Ideal for trays, boxes in the food industry.

- Designed for spiral coolers/freezers
- ▶ References dating back to 1988 for ScanBelt radius
- Both S-curves and J-curves
- Varied accessories, such as high friction, side guards

S.201/S.201H00K/J.450

S.201 Open radius belt with a very low collapse factor. Can run in S- and J-curves for spiral coolers/ freezers as well as normal radius applications

S.201Hook Open radius belt with a very low collapse factor. Can run in freezers as well as normal radius applications.

J.450 Very open radius belt with heavy duty outer link S- and J-curves for spiral coolers/ For longer spirals. Runs in J-curves

MATERIAL DESCRIPTION

STANDARD MATERIALS

All belts from ScanBelt are naturally available in the traditional materials; Polyethylene (PE), Polypropylene (PP) and Polyacetal (POM). All standard materials are FDA approved for direct food contact.

POLYETHYLENE can handle operational temperatures down to \$\pm 73\circ\$ C and is thus suitable for installations in cold areas. It will also be ideal for applications that require a flexible belt material with superior impact strenath.

POLYPROPYLENE can handle operational temperatures up to 100° C. It is a harder material with a good pulling force. It is suitable for installations in high range temperature areas as well as boilers and dryers to a certain degree. It has excellent chemical resistance towards aggressive cleaning chemicals etc.

POLYACETAL is a strong all-round material with a working temperature from \$43° to +95°. This material has great pulling force and a hard surface, which gives a reduced friction to both the support and the product. It is sensitive to blows or knocks due to low impact strength. Suitable for bottling and canning industry. Should be used with caution in installations that use cleaning agents containing acid and/or chlorine.

LOCKING SYSTEMS

ScanBelt modular belts are available with a number of different rod retention systems.

Some belts are available with our unique, revolutionary self-lock, one piece rod retention system that makes disassembly an easy task, and the pins are reusable (see photo).

With the improved pin retention system, both assembly and disassembly are simplified. In addition, the hygiene properties are greatly improved.

SPECIAL MATERIALS

ISO 9001:2008

In order to solve tasks out of the ordinary, we are able to deliver a variety of special materials as well as additives.

HIGH TEMPERATURE AREAS

For cookers, steamers and air dryers etc. it will be an advantage to use a temperature stabilised polypropylene material that is not affected by a constant high temperature.

For blanchers and pasteurizers etc., where the belt's thermal expansion may be an issue, we supply belts in composite material. This reduces the thermal expansion coefficient by approx. 75% from normal polypropylene. It furthermore has an excellent chemical resistance and will help dissipate static charges that might build up in certain

NYLON

Nylon can be used in both warm and cold areas as it handles temperatures ranging from -45° to 160° (depending on the choice

of nylon). It is a soft material with a good pulling force. It has a high impact strength as well as a decent chemical resistance. Density ranges from 1.08 to 1.37. We use standard Nylon, Nylon 6 glass-reinforced, Nylon 6.6, Nylon 6.6 glass-reinforced, Akulon Nylon. The Nylon 6 types are FDA approved. Note that not all our belt types are offered in Nylon.

REINFORCED MATERIALS

In areas with distinct necessity for added pulling force, we can supply either fibre or mineral reinforced materials. These will significantly improve the pulling force, but at the same time lower the impact

ELECTRICAL CONDUCTIVITY

Most materials can be delivered either as electrically conductive or antistatic. The electrical conductivity can be varied to suit your

NON-STICK

There is often a need for" non-stick" effect particularly for freezing applications, where it is necessary to avoid the products sticking to the belt surface. For this purpose, we deliver polyethylene in a non-stick

DETECTABLE POLYPROPYLENE

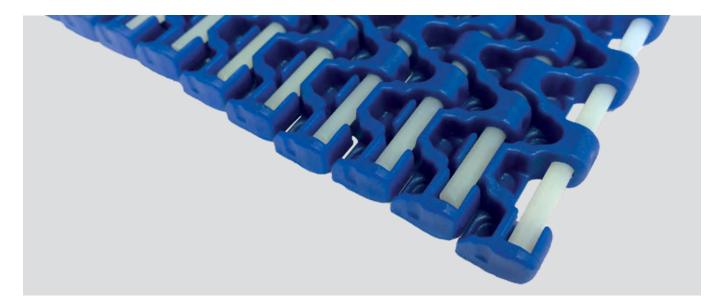

The material is highly relevant in food applications where there is a risk of contamination. The compound is designed to be detected by metal detectors and X-ray machines. Sensibility degrees may vary with customer's equipment. The material complies with FDA regulations for use in food processing and packaging.

FLAME RETARDANT MATERIALS

For use in fire hazardous areas, we can supply V-O rated materials that will not sustain a flame or burn actively. The material is FDA approved for direct food contact.

Other special materials are available, please visit www.scanbelt.com
